About *stack* by alban le henry

stack is a storage unit that can be stacked freely, without limit. The unit consists of a starting element and an ending element. There are three types of finish, that are displayed on the preparatory drawings.

Through a simple assembling system, *stack* can extend or contract. Subsequently, *stack* can be adapted to the number of objects that have to be stored, as to the space available in the habitat.

About alban le henry

alban le henry lives and works in Paris.

At ENSCI (École Nationale Supérieure de Création Industrielle) - Les Ateliers, alban completed his studies of design. He graduated in 2001 and, afterwards, worked for several years as an assistant to the Bouroullec brothers, whose studio became his second school.

In 2007, he opened his own design studio and embraced a broad variety of projects, designing industrial objects as well as scenography.
